Narrative:

- **Onboarding:** The journey begins with a **frictionless, segmented signup process** designed to capture intent immediately. Instead of a generic setup, the creator answers 2–3 brief questions about their role and team goals (e.g., "Marketing team" or "Sales team") [1](#) .
 - **Intelligent Scaffolding:** Based on this segmentation, Slack's **AI Onboarding Assistant** automatically suggests a relevant structure. For a marketing team, it might propose channels like `#campaigns` and `#content-planning` [2](#) · [Canvas](#).
 - **Today page (currently launchpad):** Upon entering the workspace, the creator is greeted by the **Today page**, a central hub that replaces the "cold start" emptiness with a clear checklist [3](#) .
 - **Initial Tasks:** The creator completes core setup tasks—migrating their work from other tools through **Bring Work into Slack** experiences [4](#) · [Canvas](#).
 - **One-Click Authorization:** The creator can integrate their primary tools (like GSuite or Asana) through a simplified, embedded webview experience within the Launchpad, eliminating the need to navigate to the app marketplace [6](#) .
 - **Email Integration & Search:** Advanced teams benefit from email connector functionality brought down-plan, allowing users to search email directly within Slack, surface results in AI-generated answers, and preview emails/attachments without leaving Slack, making Slack the central hub for work [13](#) .
- **Invitation & Scaling team:** Once initial setup is complete, the focus shifts to **team momentum**. Today now acts as a "Shared Team Section," visualizing progress for the creator and the first few joiners [7](#) .
 - **Simplified invite experience:**
 - **Feature Penetration & Premium Value:** As collaboration intensifies, Slack/slackbot recommends

advance productivity capabilities like instant huddles and canvas, positioning them as ideal candidates for conversion [10 🔒](#).

- **Dynamic Progress Visualization:** The creator sees a dynamic avatar grid showing team join status. If only two out of five core members have joined, the Launchpad nudges them: "Your team could use a designer—invite one now" [8 🔒](#).
 - The creator sees visible progress in the feed, such as "Alex joined the team" or "Sarah created #project-alpha," making the workspace feel active and alive [9 · 🔒 Canvas](#).
 - As the team hits milestones—such as connecting their first tool or having all invited members join—the Launchpad celebrates with visual progress indicators, showing the team is now "80% set up" and ready for full-scale collaboration [10 🔒](#).
- **Smart Invites v2:** During collaboration, when team shares objects like GDoc, Slackbot pulls in data from integrated apps to suggest relevant team members, triggering a simplified invitation flow with contextual recommendations [7 · 🔒 Canvas](#).
- **Viral loops → New audience:** As part of a workstream, an internal meeting occurs using huddles. During the conversation, an external guest is pulled in using instant huddles [#proj-external-guests-huddles-canvas](#).
 - Instant huddles expose Slack to new users outside the organization, creating viral growth opportunities [11 🔒](#).
 - The external user is nudged to create a Slack account via email, with streamlined mobile onboarding [12 🔒](#).
 - They continue from their email to their phone, starting a new workspace optimized for mobile-first experiences [12 🔒](#).
